Cardlock Vending offers our island receipt printer which interfaces with all CardMaster units.

CM-RP comes mounted on our standard 48" pedestal. It can also be mounted with our optional wall mounting bracket.

The unit is a RS-232 serial interface and must be within 40 feet of the CardMaster. The wiring is in a 3/4" or 1" conduit looped from the CardMaster to the CM-RP. The receipt, sample shown above, is on 2" thermal paper.

CM-RP installs on CardMaster's CPU board in using the serial port that might have been used for a journal printer.

CardMaster will support the receipt printer or the journal printer, but not both.
