

CARDLOCK VENDING

GateMaster

GateMaster limits access to unattended facilities such as restrooms, terminal gates, RV dump facilities, trash disposal areas and other “non-public” areas.

By use of a magnetic stripe card access is limited to those cards having the correct system ID number - a 4 digit number identifying the issuing company. Cards can be proprietary or fleet cards (such as CFN or Pacific Pride). It can accommodate up to five system ID numbers. The GateMaster does not have transaction or usage memory or printing capability.

Available options include a wall mounting bracket, a 48” high pedestal, and an annunciator which provides audible confirmation of card acceptance.

Cardlock Vending also has CardMaster for a higher level of security. The CardMaster GateControl requires a personal card or keypad entry of a card number along with a PIN (personal identification number) to verify the user and provides printed and electronic records of transactions.
